

PETROVAC

Vacuum Pump System for Interstitial Monitoring

Patent Pending

The Next Standard in Secondary Containment Leak Detection

PetroVac™ by Petro Specialties, Inc. is a purpose-built, positive displacement vacuum pump system for interstitial monitoring of double-walled tanks, piping, and containment sumps especially where submersible turbine pumps (STPs) are not present or practical

Ideal For

- Hospitals, high-rise buildings, specialty manufacturing
- Generator and boiler UST systems
- Chemical and waste storage requiring Title 23 compliance

Key Features & Benefits

Reliable Leak Detection

Maintains stable vacuum, enabling rapid breach detection in tanks and piping

Automatic Operation

Integrates with the Veeder-Root TLS-450Plus and SCLD module for automatic vacuum restoration and alarms

Flexible for Many Applications

Perfect for systems without STPs (suction, waste, and chemical applications)

Independently Tested

Ken Wilcox Associates confirm identical performance to STP-based systems with TLS-450Plus + SCLD

1 Year Limited Parts Warranty

(Parts only, labor and service not included)

Manufacturer Approved

Certified for Veeder-Root TLS-450Plus SCLD systems

Recognized Standard

Meets European EN 13160-2 leak detection standard

System Includes

PetroVac vacuum pump, pump on light, Class I Division I rated electrical, UL listed cabinet and components

PetroVac™ is not affiliated with, sponsored by, or endorsed by Veeder-Root or its parent Vontier Corporation. Veeder-Root is a registered trademark of its respective owner.
